BARDOO
Charolais & Pasture Seed

BARDOO CHAROLAIS

10th Annual Bull Sale

LOT 19

1pm Friday 25th of November 2022

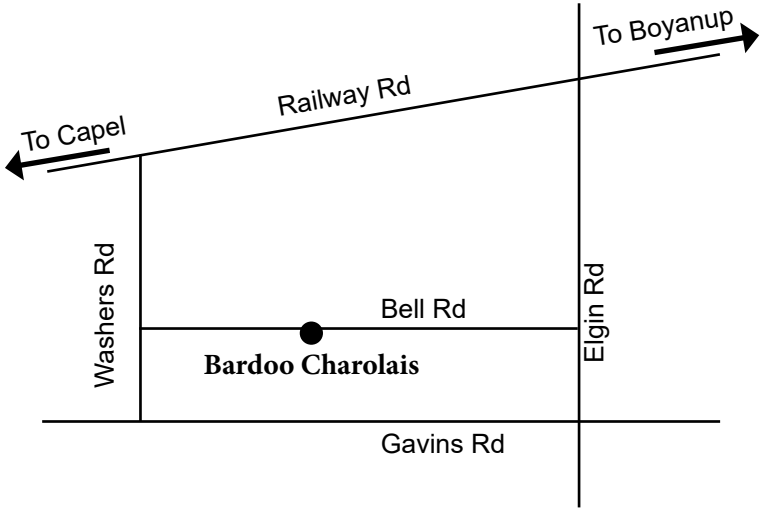
130 Bell Road, Elgin WA

BARDOO
Charolais & Pasture Seed

VENUE:

Bardoo Charolais are excited to be holding our fourth sale in our new yards, which are located at 130 Bell Road, Elgin WA.

As you can see from the map below, you can access Bardoo Charolais from a couple of different directions. Once on Bell Road you will see our sign on the Southern side of the road. You will find the new yards behind the sheds.



If you have any troubles finding us on sale day, please don't hesitate to call us on 0427 966 126.

BARDOO CHAROLAIS

10th Annual Bull Sale

1pm Friday 25th of November 2022

Yards, 130 Bell Road, Elgin

35 Charolais Bulls

Inspections welcome prior to sale
or from 10am on sale day.

Welcome to the
Bardoo Charolais
10th Annual Grass Fed Bull Sale.

Bardoo are pleased to present a line of rising 2-year-old bulls who have exceeded our expectations. The new genetics which have been sourced have contributed to this outstanding line of bulls available to the buyer at this year's sale. We closed the Bardoo herd 6 years ago and as such, genetics are researched and sourced to be used as embryo transfers and artificial insemination. This year we are excited to offer the first Silverstream Manhattan calves. The 2023 sale will see SCR Triumph added to the sire lineup, and in the future, we will offer Silverstream Padra and Silverstream National genetics from our Embryo and AI program.

Our bull sale is held in November so as we may showcase bulls in prime condition off a pure grass diet. We believe that selling bulls at this time of the year ensures that they can settle into their new environments quickly and not lose condition. Our clients have reported that Bardoo bulls go on to thrive as their diets are not vastly different. The bulls on offer have not been supplemented, other than hay and therefore their weights cannot be compared to those bulls who have had a heavy grain supplementation diet.

All bulls have been:

- BVDV tested negative
- Structural, fertility, morphology and internal organs assessed through the Veterinary Bull Breeding Soundness by Busselton Cattle Vets
- Scanned for EMA, IMF and Rib fats in mid-October
- Vaccinated with 7in1 and Vibrovax with boosters due in April
- Treated with Eprinex and Eclipse rotation
- All trace boluses have been given December 21
- JBAS 8 whole herd tested November 21 all tested negative.

This year sees the 10th annual on property sale for Bardoo who are a family owned and operated enterprise in the South West of Western Australia. We continue to be the largest registered Charolais herd in Western Australia. We ensure we offer the best to our clients by culling severely for temperament and structure soundness. In 2021 a total of 89 bulls were born on property which allows us to offer you the pinnacle of our breeding program.

In November 2021 at the Elders Charolais Weaner Feature Sale, Bardoo sired calves won 1st 2nd and 3rd placings which we think is quite an achievement for their owners and a testament to our breeding program.

Breeding values of each enterprise differ immensely, however Bardoo have a bull to suit your needs. We welcome and encourage enquiries on how our genetics may compliment your program. For more information please don't hesitate to contact Barry.

We hope to see you on Friday the 25th of November 2022 with inspections from 10am and the sale to start at 1pm.

Barry and Dot Bell & Denise, Brendan, Sam and Jake Lynch.

VIDEOS of some of the bulls available upon request
OR on the Facebook page @bardoocharolais

SALE INFORMATION

INSPECTION: Bardoo welcomes inspection of bulls prior to the sale by arrangement with the agent or vendors. Please call Barry on 0427 966 126 or Robert Gibbings (Elders) on 0418 931 146. Bulls will be available for inspection on sale day from 10am.

AUCTIONSPLUS: Our sale will be conducted live and will be interfaced with AuctionsPlus for the first time. Please note: all new registered AuctionsPlus buyers are required to complete Buyer Induction Training prior to bidding. AuctionsPlus recommends that all intending bidders have completed their registration and training 24 hours prior to auction. You will find instructions on page 6.

HELMSMAN AUCTION: This sale will be run using the Helmsman system. See details on the following page.

PHONE BIDDING: available on sale day. Please contact the agent or vendor prior to sale day to organise.

SUPPLEMENTARY SHEET: All bulls raw data will be available upon request and on the day of the sale.

DELIVERY: Every care will be taken with stock staying on the property but no responsibility will be accepted. All bulls remaining on the property after the sale will need to be insured. Insurance will be available on the day of the sale through Elders.

SALE DAY SAFETY: We pride ourselves on the excellent temperament of our bulls, however there are risks associated with bull behaviour on sale day and it is our responsibility to keep you safe. If you wish to enter pens please be aware that bulls may fight with each other or they can be playful. Remember that the quietest bulls can react to the pressure of a lot of people and noise. If you have limited mobility or if you are accompanied by small children, please do not enter the sale pens.

TAKING YOUR BULL HOME: As you may understand all bulls leaving the Bardoo property are leaving the security of the property they were raised on, their mob and what they know. They will arrive to a new environment where we recommend unloading the bull to a companion such as a cow or steer. At Bardoo the bulls are moved around the property with motorbikes and without the use of dogs. All fences are electric on the property.

Charolais Breed Averages for 2020 born calves

HELMSMAN AUCTION

How it works

1. On arrival, the intending purchasers register at the Elders bid table and receive a buyer number.

2. All bulls are displayed for inspection, with relevant information provided in the catalogue.

3. When the sale commences, all bulls are on the market simultaneously. You may bid on any bull, regardless of lot number, by filling in a card and handing it to a 'runner' or Agent at the board.

4. You may open the bidding at its "upset price" of $5,000 and further bids in multiples of $500 will be accepted. There is no limit on the size of bid.

5. Bids are recorded with the buyer's number on a large board adjacent to the bull display area. You can bid on any number of bulls at once and can see at a glance whether your bid still stands or has been overbid.

6. There is no pressure to commit yourself to another bid. If your first choice bull goes over the limit you can still bid on any other bull on sale.

7. A bid once submitted and recorded cannot be retracted, and the person responsible for submitting such a bid will be responsible for it until it is overbid.

8. The sale will remain open for a minimum of fifteen minutes. A bid registered in the last two minutes will result in a two minute time extension.

9. Further bids would trigger the same process until no more bids are received in a specified period, which would signify the end of the sale. (Note that the bidding interval may remain at two minutes throughout or may be shortened progressively to as little as 15 seconds to speed up the sale.)

This method of buying bulls combines the good features of both the auction system and sale by private treaty. You get the opportunity to bid on and buy any bull in the offering and you pay competitive market value without any pressure.

The Benefits:

1. You have more time to consider lodging a bid. You can place genuine bids on any bull of your choice at any time during the sale period.

2. You have the opportunity to re-assess each lot during the sale period without any pressure to make an instant decision.

3. You have the opportunity to take home the bulls you want , irrespective of lot order. For example, having been out-bid on lot 25, your first choice, you can move back to your second choice bull earlier in the catalogue, for example lot 7.

4. If you need more than one bull, Helmsman gives you flexibility and time to average your purchase costs.

AuctionsPlus

How to Register and Bid on AuctionsPlus

1. Go to **www.auctionsplus.com.au** to register at least 48 hours before the sale.
2. Select "**Sign Up**" in the top right hand corner.
3. Fill out your name, mobile number, email address and create a password.
4. Go to your emails and confirm the account.
5. Return to AuctionsPlus and log in.
6. Select "**Dashboard**" and then select "**Request Approval to Buy**".
7. Fill in buyer details and once completed go back to Dashboard.
8. Complete buyer induction module (approx. 30 minutes).
9. AuctionsPlus will email you to let you know that your account has been approved.
10. Log in on sale day and connect to auction.
11. Bid using the two-step process – unlock the bid button and bid at that price.
12. If you are successful, the selling agent will contact you post sale to organise delivery and payment.

Evaluating and Reporting Veterinary Bull Breeding Soundness

Purpose: **The Veterinary Bull Breeding Soundness Evaluation (VBBSE) is a tool used to identify risk factors that may affect bull fertility in a natural service situation.**

Definitions:

ACV Standards: as published in Beggs et al (2013) *Veterinary Bull Breeding Soundness Evaluation. Published by ACV in 2013 and available from the ACV office.*

Components of the VBBSE

Australian Cattle Veterinarians (ACV) uses the following components to evaluate bull as part of the VBBSE:

Scrotum- Scrotal circumference measured as per published ACV method and reported in cm.
Physical- Examination of bull's structure and genetalia
Semen- Crush-side visual and microscopic assessment
Morphology- Standardised high-magnification microscopy of preserved sperm.
Serving Ability- Standardised test used to evaluate the ability of a bull to mate normally
ACV recommends that all of the above components be assessed.

Report Indicators

Detailed data is reported as either actual measurements, Yes/No, Normal/Suspect/Abnormal, or on a scale as indicated in published ACV standards. A summary risk assessment of each VBBSE component is provided and uses the following key:

✔	Tick - All attributes for this component measured were consistent with the ACV standards. No risk factors for reduced fertility were identified during for this part of the VBBSE examination.	Q	Qualified - Not all attributes for this component were consistent with ACV standards but these abnormalities may not necessarily preclude the bulls use. A further comment will be provided. **The client should seek advice from their cattle veterinarian as to the suitability of this bull for a particular purpose. Retesting may be recommended.**
✖	Some attributes for this component measured were not consistent with ACV standards. This bull has a significant risk of reduced fertility in the short term at least. Because some conditions may be temporary, the client should seek advice from their cattle veterinarian.	NT	This VBBSE component was not evaluated or not fully evaluated either at the owners request or as indicated.

Using a Veterinary Bull Breeding Soundness Evaluation (VBBSE) report
The report indicates ***the level of risk of reduced fertility*** at the time of testing the bull, and helps predict whether a bull is likely to be able to seek out oestrus females, mate them repeatedly, impregnate them with good quality semen, if the bull were to be put into a paddock mating situation in the short term. The published standards have been selected as the best indicators, but are ***not a guarantee*** that the bull is either fertile, sub-fertile, or infertile.

The ***VBBSE report applies to the date of the examination*** and no responsibility can be taken for any subsequent events that may affect the ability of the bull to breed satisfactorily or otherwise. In consultation with a cattle veterinarian, clients should consider all aspects of bull fertility when requesting an examination and choose whichever evaluation procedures will best minimise the risk of herd sub-fertility or infertility due to bull failure, or are necessary to meet specific transaction requirements.
The report can only indicate whether bulls meet thresholds for the traits measured based on objective measures and professional judgement of the cattle veterinarian. **Overall judgement of a bull as fertile or sound is not appropriate.** However, bulls may be deemed at risk of being sub-fertile or infertile if the VBBSE detects indicators of this. A prognosis (predicted future status) based on detailed data collected may be provided where thresholds are not achieved or there are other indicators of sub-fertility or infertility.

Limitations of the VBBSE report
The report indicates a level of risk – ***it does not indicate future status***, especially following relocation or management changes. (Bulls, and especially fat bulls, experiencing these events should be re-examined after acclimatisation.) As all possible components of a VBBSE may not be conducted, there always remains a risk that bulls may not reach their full potential.

ACV recommends that all bulls should be vaccinated against /tested for local endemic diseases.
