Charolais

Lot 1

13th Annual Bull Sale

& Celebration of 100 Years On Our Farm!

1pm, Friday 28th of November 2025

130 Bell Road, Elgin WA

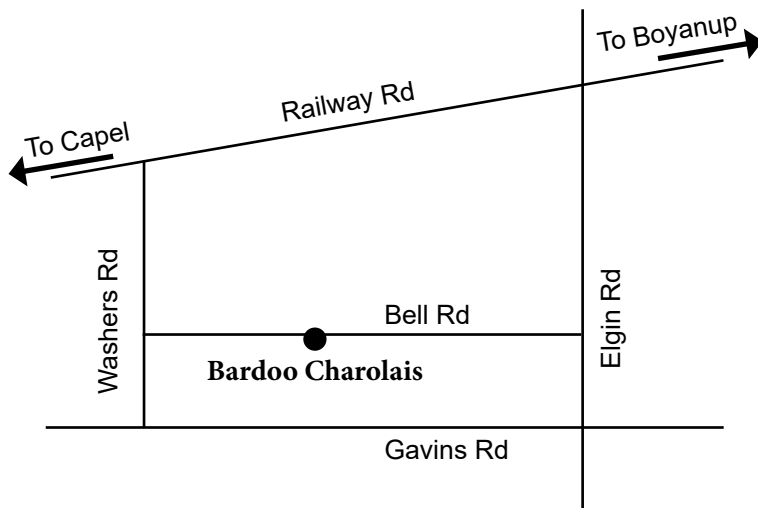

BARDOO
Charolais & Pasture Seed

VENUE:

The Bardoo Charolais Sale will take place at our undercover yards, located at 130 Bell Road, ELGIN WA.

As you can see from the map below, you can access Bardoo Charolais from a couple of different directions. Once on Bell Road you will see our sign on the Southern side of the road.

You will find the new yards behind the sheds.

**If you have any troubles finding us on sale day,
please don't hesitate to call us on 0427 966 126.**

BARDOO CHAROLAIS

13th Annual Grass-Fed Bull Sale

1pm Friday 28th of November 2025
Yards, 130 Bell Road, Elgin

33 Charolais Bulls

Inspections welcome prior to sale
or from 10am on sale day.

Welcome to our 13th Annual Grass-Fed Bull Sale.

As 2025 marks the centennial of our farm, the Bell family has cultivated practices and standards steeped in both tradition and innovation. Throughout generations, our family has prioritised animal welfare, sustainability, and progressive breeding strategies to ensure our cattle not only thrive on our land but continue to improve herds across the region. We are dedicated to ongoing breeding adaptation, integrating both traditional wisdom and modern science into every aspect of farm management.

The selection process for this year's bulls was exceptionally rigorous. Each animal was observed across multiple stages of development, not only for physical traits but also for positive behaviour in group environments. We believe that calm temperament and reliable structure are essential characteristics for long-lasting, productive sires. Only those bulls who met our benchmarks for conformation, robustness, and ease of handling were progressed to veterinary evaluation.

Bulls are reared exclusively on natural pasture, which encourages strong rumen development and physical resilience. Supplementation with home-grown hay and quality silage supports nutrition during seasonal fluctuations, allowing us to maintain consistent growth rates without relying on grains. This practice results in healthier animals and provides buyers with stock that adapt readily to a variety of production systems.

By partnering with the experienced team at Cattle Vets Busselton, we provide objective assessments regarding reproductive potential and general health. The comprehensive Bull Breeding Soundness Exam encompasses structural appraisal, semen quality, and thorough checks of internal organs. These measures minimise risk and give buyers confidence in their investment.

Our strict animal health protocols go beyond industry requirements. Routine treatments for parasites, full vaccination schedules, and trace element supplementation safeguard the long-term productivity of each bull. Maintaining our JBAS 8 status demonstrates our dedication to biosecurity and disease prevention, protecting both our livestock and those of our clients.

Prior to and during the sale, Barry will be available to answer any questions and share insights about each animal's background and genetic profile.

Whether you are seeking to enhance productivity, introduce new genetics, or build a resilient breeding program, we are eager to support your goals. Please join us for an opportunity to see firsthand the quality, care, and passion that define the Bardoo Bull Sale tradition.

All bulls have:

- Negative tested for BVDV.
- Been evaluated for structure, fertility, morphology, and internal organs via the Veterinary Bull Breeding Soundness exam (Cattle Vets, Busselton).
- Received vaccinations for 7in1 and Vibrovax, with boosters due in April 2026.
- Been treated with Eprinex and Eclipse on a rotational basis.
- Had all trace element boluses administered.

We look forward to your participation and hope to welcome you at the event. If you need details about the location, time, or agenda, just give us a call. We're here to help with any questions so your visit goes smoothly.

If you are unable to attend the event in person, phone bidding is available. Please contact Barry, Denise, or a member of the Elders team for further assistance.

Thanks for your interest!

Barry & Dot Bell, and

Denise, Brendan, Sam & Jake Lynch.

VIDEOS of the bulls
available upon request

SALE INFORMATION

INSPECTION

Bardoo welcomes inspection of bulls prior to the sale by arrangement with the agent or vendors. Please call Barry on 0427 966 126 or Alex Tunstill (Elders) on 0427 093 655.

Bulls will be available for inspection on sale day from 10am.

HELMSMAN AUCTION

This sale will be run using the Helmsman system. See details on the following page.

PHONE BIDDING

Available on sale day. Please contact agent or vendor prior to sale day to organise.

SUPPLEMENTARY SHEET

All bulls raw data will be available upon request and on the day of the sale.

DELIVERY

Every care will be taken with stock staying on the property but no responsibility will be accepted. All bulls remaining on the property after the sale will need to be insured. Insurance will be available on the day of the sale through Elders.

SALE DAY SAFETY

We pride ourselves on the excellent temperament of our bulls, however there are risks associated with bull behaviour on sale day and it is our responsibility to keep you safe.

If you wish to enter pens please be aware that bulls may fight with each other or they can be playful. Remember that the quietest bulls can react to the pressure of a lot of people and noise.

If you have limited mobility or if you are accompanied by small children, please do not enter the sale pens.

SALE INFORMATION

TAKING YOUR BULL HOME

As you may understand, all bulls leaving the Bardoo property are leaving the security of the property they were raised on, their mob and what they know. They will arrive to a new environment where we recommend unloading the bull to a companion such as a cow or steer.

At Bardoo the bulls are moved around the property with motorbikes and without the use of dogs. All fences are electric on the property.

CHAROLAIS GENETIC CONDITION

Similar to all breeds of livestock, Charolais have identified genetic conditions including Bovine Progressive Ataxia.

Progressive Ataxia (BPA), a neurodegenerative disease of the central nervous system which if affected, results in an animals inability to stand. An animal can be an unaffected carrier and live a normal life, but if bred to another carrier can produce affected offspring.

Our sale bulls are tested for this condition. The status of any carriers are identified in the catalogue and on the Charolais Australia online database.

As is it a recessive condition, it shouldn't be of concern to purchasers crossbreeding with Charolais, however breeders with Charolais genetics in their breeding herd should evaluate their herd status and future breeding objectives.

Charolais Breed Averages for 2023 born calves

	CE Dir	CE Dtrs	GL	BW	200	400	600	MCW

HELMSMAN AUCTION

How it works

1. On arrival, the intending purchasers register at the Elders bid table and receive a buyer number.
 2. All bulls are displayed for inspection, with relevant information provided in the catalogue.
 3. When the sale commences, all bulls are on the market simultaneously. You may bid on any bull, regardless of lot number, by filling in a card and handing it to a 'runner' or Agent at the board.
 4. You may open the bidding at its "upset price" of \$5,000 and further bids in multiples of \$500 will be accepted. There is no limit on the size of bid.
 5. Bids are recorded with the buyer's number on a large board adjacent to the bull display area. You can bid on any number of bulls at once and can see at a glance whether your bid still stands or has been overbid.
 6. There is no pressure to commit yourself to another bid. If your first choice bull goes over the limit you can still bid on any other bull on sale.
 7. A bid once submitted and recorded cannot be retracted, and the person responsible for submitting such a bid will be responsible for it until it is overbid.
 8. The sale will remain open for a minimum of fifteen minutes. A bid registered in the last two minutes will result in a two minute time extension.
 9. Further bids would trigger the same process until no more bids are received in a specified period, which would signify the end of the sale.
- (Note that the bidding interval may remain at two minutes throughout or may be shortened progressively to as little as 15 seconds to speed up the sale.)

This method of buying bulls combines the good features of both the auction system and sale by private treaty. You get the opportunity to bid on and buy any bull in the offering and you pay competitive market value without any pressure.

The Benefits:

1. You have more time to consider lodging a bid. You can place genuine bids on any bull of your choice at any time during the sale period.
2. You have the opportunity to re-assess each lot during the sale period without any pressure to make an instant decision.
3. You have the opportunity to take home the bulls you want, irrespective of lot order. For example, having been out-bid on lot 25, your first choice, you can move back to your second choice bull earlier in the catalogue, for example lot 7.
4. If you need more than one bull, Helmsman gives you flexibility and time to average your purchase costs.

MORPHOLOGY

Evaluating and Reporting Veterinary Bull Breeding Soundness

Purpose: The Veterinary Bull Breeding Soundness Evaluation (VBBSE) is a tool used to identify risk factors that may affect bull fertility in a natural service situation.

Definitions:

ACV Standards: as published in Beggs et al (2013) *Veterinary Bull Breeding Soundness Evaluation*.
Published by ACV in 2013 and available from the ACV office.

Components of the VBBSE

Australian Cattle Veterinarians (ACV) uses the following components to evaluate bull as part of the VBBSE:

Scrotum- Scrotal circumference measured as per published ACV method and reported in cm.

Physical- Examination of bull's structure and genitalia

Semen- Crush-side visual and microscopic assessment

Morphology- Standardised high-magnification microscopy of preserved sperm.

Serving Ability- Standardised test used to evaluate the ability of a bull to mate normally

ACV recommends that all of the above components be assessed.

Report Indicators

Detailed data is reported as either actual measurements, Yes/No, Normal/Suspect/Abnormal, or on a scale as indicated in published ACV standards. A summary risk assessment of each VBBSE component is provided and uses the following key:

 Tick - All attributes for this component measured were consistent with the ACV standards. No risk factors for reduced fertility were identified during for this part of the VBBSE examination.	 Qualified - Not all attributes for this component were consistent with ACV standards but these abnormalities may not necessarily preclude the bulls use. A further comment will be provided. The client should seek advice from their cattle veterinarian as to the suitability of this bull for a particular purpose. Retesting may be recommended.
 Some attributes for this component measured were not consistent with ACV standards. This bull has a significant risk of reduced fertility in the short term at least. Because some conditions may be temporary, the client should seek advice from their cattle veterinarian.	 This VBBSE component was not evaluated or not fully evaluated either at the owners request or as indicated.

Using a Veterinary Bull Breeding Soundness Evaluation (VBBSE) report

The report indicates **the level of risk of reduced fertility** at the time of testing the bull, and helps predict whether a bull is likely to be able to seek out oestrus females, mate them repeatedly, impregnate them with good quality semen, if the bull were to be put into a paddock mating situation in the short term. The published standards have been selected as the best indicators, but are **not a guarantee** that the bull is either fertile, sub-fertile, or infertile.

The **VBBSE report applies to the date of the examination** and no responsibility can be taken for any subsequent events that may affect the ability of the bull to breed satisfactorily or otherwise. In consultation with a cattle veterinarian, clients should consider all aspects of bull fertility when requesting an examination and choose whichever evaluation procedures will best minimise the risk of herd sub-fertility or infertility due to bull failure, or are necessary to meet specific transaction requirements.

The report can only indicate whether bulls meet thresholds for the traits measured based on objective measures and professional judgement of the cattle veterinarian. **Overall judgement of a bull as fertile or sound is not appropriate.** However, bulls may be deemed at risk of being sub-fertile or infertile if the VBBSE detects indicators of this. A prognosis (predicted future status) based on detailed data collected may be provided where thresholds are not achieved or there are other indicators of sub-fertility or infertility.

Limitations of the VBBSE report

The report indicates a level of risk – **it does not indicate future status**, especially following relocation or management changes. (Bulls, and especially fat bulls, experiencing these events should be re-examined after acclimatisation.) As all possible components of a VBBSE may not be conducted, there always remains a risk that bulls may not reach their full potential.

ACV recommends that all bulls should be vaccinated against /tested for local endemic diseases.
