BARDOO
Charolais

2026
ANNUAL BULL SALE

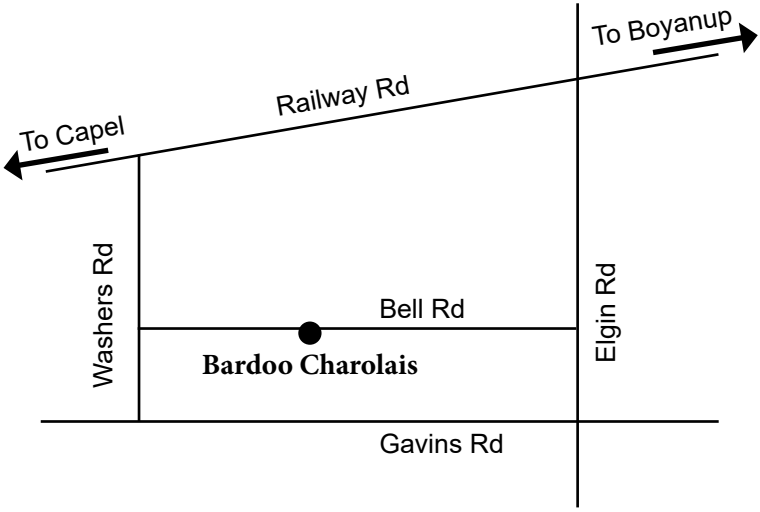

1pm, Friday 27th of November

BARDOO
Charolais & Pasture Seed

VENUE:

The Bardoo Charolais Sale will take place at our undercover yards, located at 130 Bell Road, ELGIN WA.

As you can see from the map below, you can access Bardoo Charolais from a couple of different directions. Once on Bell Road you will see our sign on the Southern side of the road. You will find the new yards behind the sheds.

If you have any troubles finding us on sale day, please don't hesitate to call us on 0427 966 126.

BARDOO
CHAROLAIS

14th Annual Grass-Fed Bull Sale

1pm Friday 27th of November 2026
Yards, 130 Bell Road, Elgin

30 Charolais Bulls

Inspections welcome prior to sale
or from 10am on sale day.

~ 14th Annual ~

Bardoo Grass-Fed Bull Sale.

Welcome to the Bardoo Bull Sale, where we are proud to offer 30 bulls bred and prepared with commercial cattle producers in mind.

Our family has proudly called this farm home for more than 100 years. Across generations, we have worked the land, raised livestock and built our program around a deep understanding of the conditions cattle must thrive in. It is this long connection to the farm that underpins our commitment to breeding honest, dependable cattle with the temperament, structure and performance to succeed in real-world commercial conditions.

Our point of difference is simple: these bulls have been developed entirely on grass, with no supplementary feed other than hay and silage. They are presented in honest, working condition, giving buyers the opportunity to assess cattle that have been raised under practical conditions and are ready to go on and perform.

We have continued to place strong emphasis on polled genetics, while never losing sight of the traits that matter most to our program: sound temperament, structural integrity and genuine growth. Every bull has been scanned, and raw data sheets will be available on sale day so buyers can review the information alongside their own visual appraisal.

Looking ahead, we are committed to keeping our genetics fresh and relevant. We have purchased females from Silverstream Charolais in New Zealand and undertaken an embryo flushing program, with a number of embryos planned for implantation in December 2026. This investment will introduce new genetics to the Bardoo herd and broaden the options available to our buyers in the years ahead.

Prior to and during the sale, Barry will be available to answer questions and share his knowledge of each animal's background and genetic profile. Whether you are seeking to lift productivity, introduce new genetics or build a more resilient breeding program, we are keen to understand your goals and help you select the right bull for your operation. We invite you to see firsthand the quality, care and passion that have shaped the Bardoo Bull Sale tradition.

Through our partnership with the experienced team at Cattle Vets Busselton, every sale bull receives objective assessment of reproductive potential and general health. The comprehensive Veterinary Bull Breeding Soundness Examination covers structural appraisal, fertility, semen morphology and a thorough examination of the internal reproductive organs. These measures help minimise risk and give buyers greater confidence in their investment.

Our animal-health protocols include routine parasite treatments, full vaccination programs and trace-element supplementation are used to safeguard the long-term health and productivity of each bull. Maintaining our JBAS 8 status reflects our commitment to rigorous biosecurity and disease prevention, helping protect both our herd and the herds of our clients.

All bulls have:

- Tested negative for BVDV.
- Been evaluated for structure, fertility, semen morphology and internal reproductive organs through the Veterinary Bull Breeding Soundness Examination conducted by Cattle Vets Busselton.
- Received 7-in-1 and Vibrovax vaccinations, with boosters due in April 2027.
- Been treated with Eprinex and Eclipse on a rotational basis.
- Received all trace-element boluses.

We thank you for your interest in the Bardoo program and invite you to inspect the bulls, review the data and select with confidence. We look forward to welcoming you on sale day.

Thanks for your interest!

Barry & Dot Bell,
and
Denise, Brendan,
Sam & Jake Lynch.

SALE INFORMATION

INSPECTION

Bardoo welcomes inspection of bulls prior to the sale by arrangement with the agent or vendors. Please call Barry on 0427 966 126, Alex Roberts (Elders) on 0427 861 164 or Jordan Clemons (Elders) on 0427 093 655 to arrange a suitable time.

Bulls will be available for inspection on sale day from 10am.

HELMSMAN AUCTION

This sale will be run using the Helmsman system. See details on the following page.

PHONE BIDDING

Available on sale day. Please contact agent or vendor prior to sale day to organise.

SUPPLEMENTARY SHEET

All bulls raw data will be available upon request and on the day of the sale.

DELIVERY

Every care will be taken with stock staying on the property but no responsibility will be accepted. All bulls remaining on the property after the sale will need to be insured. Insurance will be available on the day of the sale through Elders.

SALE DAY SAFETY

We pride ourselves on the excellent temperament of our bulls, however there are risks associated with bull behaviour on sale day and it is our responsibility to keep you safe.

If you wish to enter pens please be aware that bulls may fight with each other or they can be playful. Remember that the quietest bulls can react to the pressure of a lot of people and noise.

If you have limited mobility or if you are accompanied by small children, please do not enter the sale pens.

SALE INFORMATION

TAKING YOUR BULL HOME

As you may understand, all bulls leaving the Bardoo property are leaving the security of the property they were raised on, their mob and what they know. They will arrive to a new environment where we recommend unloading the bull to a companion such as a cow or steer.

At Bardoo the bulls are moved around the property with motorbikes and without the use of dogs. All fences are electric on the property.

CHAROLAIS GENETIC CONDITION

Similar to all breeds of livestock, Charolais have identified genetic conditions including Bovine Progressive Ataxia.

Progressive Ataxia (BPA), a neurodegenerative disease of the central nervous system which if affected, results in an animals inability to stand. An animal can be an unaffected carrier and live a normal life, but if bred to another carrier can produce affected offspring.

Our sale bulls are tested for this condition. The status of any carriers are identified in the catalogue and on the Charolais Australia online database.

As is it a recessive condition, it shouldn't be of concern to purchasers crossbreeding with Charolais, however breeders with Charolais genetics in their breeding herd should evaluate their herd status and future breeding objectives.

HELMSMAN AUCTION

How it works

1. On arrival, the intending purchasers register at the Elders bid table and receive a buyer number.

2. All bulls are displayed for inspection, with relevant information provided in the catalogue.

3. When the sale commences, all bulls are on the market simultaneously. You may bid on any bull, regardless of lot number, by filling in a card and handing it to a 'runner' or Agent at the board.

4. You may open the bidding at its "upset price" of $5,000 and further bids in multiples of $500 will be accepted. There is no limit on the size of bid.

5. Bids are recorded with the buyer's number on a large board adjacent to the bull display area. You can bid on any number of bulls at once and can see at a glance whether your bid still stands or has been overbid.

6. There is no pressure to commit yourself to another bid. If your first choice bull goes over the limit you can still bid on any other bull on sale.

7. A bid once submitted and recorded cannot be retracted, and the person responsible for submitting such a bid will be responsible for it until it is overbid.

8. The sale will remain open for a minimum of fifteen minutes. A bid registered in the last two minutes will result in a two minute time extension.

9. Further bids would trigger the same process until no more bids are received in a specified period, which would signify the end of the sale.

(Note that the bidding interval may remain at two minutes throughout or may be shortened progressively to as little as 15 seconds to speed up the sale.)

This method of buying bulls combines the good features of both the auction system and sale by private treaty. You get the opportunity to bid on and buy any bull in the offering and you pay competitive market value without any pressure.

The Benefits:

1. You have more time to consider lodging a bid. You can place genuine bids on any bull of your choice at any time during the sale period.

2. You have the opportunity to re-assess each lot during the sale period without any pressure to make an instant decision.

3. You have the opportunity to take home the bulls you want , irrespective of lot order. For example, having been out-bid on lot 25, your first choice, you can move back to your second choice bull earlier in the catalogue, for example lot 7.

4. If you need more than one bull, Helmsman gives you flexibility and time to average your purchase costs.

Evaluating and Reporting Veterinary Bull Breeding Soundness

Purpose: The Veterinary Bull Breeding Soundness Evaluation (VBBSE) is a tool used to identify risk factors that may affect bull fertility in a natural service situation.

Definitions:

ACV Standards: as published in Beggs et al (2013) *Veterinary Bull Breeding Soundness Evaluation. Published by ACV in 2013 and available from the ACV office.*

Components of the VBBSE

Australian Cattle Veterinarians (ACV) uses the following components to evaluate bull as part of the VBBSE:

Scrotum- Scrotal circumference measured as per published ACV method and reported in cm.
Physical- Examination of bull's structure and genetalia
Semen- Crush-side visual and microscopic assessment
Morphology- Standardised high-magnification microscopy of preserved sperm.
Serving Ability- Standardised test used to evaluate the ability of a bull to mate normally
ACV recommends that all of the above components be assessed.

Report Indicators

Detailed data is reported as either actual measurements, Yes/No, Normal/Suspect/Abnormal, or on a scale as indicated in published ACV standards. A summary risk assessment of each VBBSE component is provided and uses the following key:

✔	Tick - All attributes for this component measured were consistent with the ACV standards. No risk factors for reduced fertility were identified during for this part of the VBBSE examination.	Q	Qualified - Not all attributes for this component were consistent with ACV standards but these abnormalities may not necessarily preclude the bulls use. A further comment will be provided. **The client should seek advice from their cattle veterinarian as to the suitability of this bull for a particular purpose. Retesting may be recommended.**
✘	Some attributes for this component measured were not consistent with ACV standards. This bull has a significant risk of reduced fertility in the short term at least. Because some conditions may be temporary, the client should seek advice from their cattle veterinarian.	NT	This VBBSE component was not evaluated or not fully evaluated either at the owners request or as indicated.

Using a Veterinary Bull Breeding Soundness Evaluation (VBBSE) report

The report indicates ***the level of risk of reduced fertility*** at the time of testing the bull, and helps predict whether a bull is likely to be able to seek out oestrus females, mate them repeatedly, impregnate them with good quality semen, if the bull were to be put into a paddock mating situation in the short term. The published standards have been selected as the best indicators, but are ***not a guarantee*** that the bull is either fertile, sub-fertile, or infertile.

The ***VBBSE report applies to the date of the examination*** and no responsibility can be taken for any subsequent events that may affect the ability of the bull to breed satisfactorily or otherwise. In consultation with a cattle veterinarian, clients should consider all aspects of bull fertility when requesting an examination and choose whichever evaluation procedures will best minimise the risk of herd sub-fertility or infertility due to bull failure, or are necessary to meet specific transaction requirements.

The report can only indicate whether bulls meet thresholds for the traits measured based on objective measures and professional judgement of the cattle veterinarian. **Overall judgement of a bull as fertile or sound is not appropriate.** However, bulls may be deemed at risk of being sub-fertile or infertile if the VBBSE detects indicators of this. A prognosis (predicted future status) based on detailed data collected may be provided where thresholds are not achieved or there are other indicators of sub-fertility or infertility.

Limitations of the VBBSE report

The report indicates a level of risk – ***it does not indicate future status***, especially following relocation or management changes. (Bulls, and especially fat bulls, experiencing these events should be re-examined after acclimatisation.) As all possible components of a VBBSE may not be conducted, there always remains a risk that bulls may not reach their full potential.

ACV recommends that all bulls should be vaccinated against /tested for local endemic diseases.
