Kills the parasites that count

The two unique models of Dectomax® Injectable and Dectomax® Pour-On give you two powerful choices to control the parasites that count, including the five major worms, lice, cattle tick and buffalo fly.* Both models have the active doramectin that makes the difference. Its the broad spectrum efficacy and persistent days of activity against the key internal parasites that makes the difference with Dectomax.

Dectomax provides for protection for your cattle, with fewer treatments and reduced pasture contamination. It also has no adverse effect on dung beetle populations.¹⁻²

Dectomax Pour-On

The reliable all-rounder provides protection against the worms that count.

- Convenient, easy to administer
- Persistent activity against the 5 major worms
- Nil milk withholding period
- Rainfast
- Meat withholding period of 42 days
- Export slaughter interval of 42 days

**NIL MILK
WITHHOLD
PERIOD**

Dectomax Injectable

This high performance model provides injected performance where it's needed.

- Reliable dosing, every time
- Persistent activity against the 5 major worms
- Controls cattle tick for up to 28 days
- Low irritant formulation, easy to administer
- Meat withholding period of 42 days
- Export slaughter interval of 42 days.

**CATTLE
TICK
CONTROL**

Welcome Message

Dear Fellow Cattle Breeders.

Welcome to our 17th Southern Sale

On behalf of southern Charolais studs we are pleased to present a quality yarding of top end working age bulls and females for sale. As a committee we have put together over 30 bulls to enable clients to have a large selection to satisfy requirements for their own operation. The bulls are industry focused for vealer production so buyers can value add to the silver calf advantage. This year has also seen the addition of Auctions Plus available for online bidding for those who cannot make it to the sale on the day.

The Charolais breed has again asserted itself firmly as the ultimate cross breeding choice. Calves have consistently weaned early and heavy, hitting weights and returning profit on investment for a good bull.

The bulls available have all been inspected, semen tested and excluded to be persistently infected for pesti virus, so buyers can purchase knowing bulls are ready to work and disease free. Most have EBV's available to assist in your selection.

There is also a good selection of females on offer this year for buyers wanting to expand cow numbers or those wanting to get into Charolais.

I would like to take this opportunity to thank all of the vendors and sponsors for their support in making the sale possible.

We are all looking forward to catching up on Monday 18th March. Bulls will be yarded for inspection by 10AM and also available for inspection prior to the sale by contacting vendors.

**Yours sincerely,
Colin Pickering.
Chairman.

Charolais Silver Calves- your golden opportunity

SALE INFORMATION

Fertility guarantee:

a) Semen test is optional, however vendors are reminded that it is in their best interest to have their bulls tested within 2 weeks prior to the sale. Bulls are to be sold as fertile and capable of natural service. The purchaser will have the right of cancelling the sale within six months of the date of the sale if they can submit a Veterinary report stating that the bull is infertile or incapable of natural service. The veterinary surgeon must have stated that, in his opinion, the bull has not suffered since delivery to the purchaser, any injury or maltreatment which could have affected its breeding ability. The vendor is liable to refund the purchase price of the animal in full.

b) All females are to be sold as guaranteed breeders. Where a purchaser submits a veterinarian certificate within twelve months of the date of the sale stating that a female of joinable age is infertile and, in the veterinary surgeon's opinion, has not suffered, since delivery to the purchaser, and any injury or maltreatment which could have affected her breeding ability, the Vendor is liable to refund the price in full. This will not apply where an attempt has been made to transfer embryos from the female.

c) Females 24 months and over are to be pregnancy tested in calf or have a calf at foot, vendors must supply a PTIC Certificate for every female entered in the catalogues as PTIC. Females under 24 months may be mated or unjoined.

Conditions of sale for interstate purchases:

Any animal, purchased for interstate movement, which requires further tests will be forwarded to an approved Quarantine area where appropriate tests will be carried out in compliance with the entry requirements into the destination state. The cost of agistment, transport, and health status tests are to be borne by the purchaser of the all cattle passing such tests, or by the vendor, should they fail to pass such tests. Payment for the cattle to the vendor will be made within normal terms of sale whether or not the cattle have been tested for entry into the nominated state. In the event of cattle failing health tests and the sale being cancelled, the vendor will refund all moneys, paid as settlement, for the purchaser.

Health:

Each animal must belong in a herd accredited free or confirmed of both brucellosis and TB. A national vendor declaration form must be completed before the sale

All cattle including calves must be tested Pestivirus negative. Pestivirus Laboratory results showing a negative test must be provided to the sale committee 7 days prior to sale day. (* This will be strictly adhered to).

To be eligible for entry, cattle must originate from:

- A herd with at JBAS Score of 6 or higher

Inspection:

All cattle must be purebred, registered and correctly tattooed as required by the Charolais Society of Australia Ltd. Cattle will be accepted or rejected on the basis of the Charolais Society of Australia Regulations for Show and Sale.

Transfer Fees:

Transfer fees are the responsibility of the vendors in accordance with the Regulations of the Charolais Society of Australia Ltd.

Herd Health Indicators:

Vaccinations are shown in the comments on all animals. All sale animals have been tested Negative for Pestivirus.

Sale catalogue vendors and/or their agents do not give any warranty as to the errors or omission, if any, in these particulars which they believed to be accurate when compiled. Prospective purchasers should satisfy themselves by inspection or otherwise as to the accuracy of the particulars.

To put dollars in your pocket....

A Charolais sire over a British Breed female produce the highly valued Silver Calf that can reach target weights at a younger age.

Dam: LANGI GHIRAN ESTELLA 7 (JRR E16E)

LANGI GHIRAN ESTELLA 36 (JRR A8E)

Comments: Vac: 5in1, Lepto. Another well proportioned bull that will have a larger end maturity weight. He carries a good muscle pattern, good angles and feet along with a beautiful topline. Bred in the purple having Windfall, Pinay and Mac all in his pedigree. Structurally very correct bull that will service all aspects of the beef industry from vealers to bullocks or replacement females with that bit of extra end maturity growth.

Dam: WATERFORD HIP HIP HOORAY (WET H51E) (P)

WATERFORD XANTHIPPE (WET X32E) (P)

Comments: Vac: 5in1, Lepto. Mustang is an impressive bull due to his length, balance, correct structure and foot shape. Mustang's Dam was a successful show heifer and gone on to be an even better breeding cow with a lovely square udder. His sire Hermes is known for producing low birthweight sires with performance. Mustang is above average for 90% of his traits, low birthweight, high early growth rates, good EMA and positive fat cover. His calves should also show strong maternal traits with good calving ease and above average milk. Is not often you find such a good bull with such an even set of ebv's. Stud sire Prospect. Semen Tested.

CHENU PUSSYCAT 18 (RLK E4E) (P)

LANGI GHIRAN GO CATS (JRR G5E)

Dam: LANGI GHIRAN ESTELLA 24 (JRR J15E)

LANGI GHIRAN ESTELLA 12 (JRR F16E) (P)

Comments: Vac: 5in1, Lepto. A lighter framed heifer who goes back to some great names in the Charolais breed including Pinay and Grid Maker. Well figured heifer with positive calving, negative gestation length and above average growth on all dates. She has been AI to LT Venture on 9/11/2018 and depastured to Chenu Nemesis, an LT Ledger son. A genuine heifer that will breed for many years to come.

Dam: VALLEY VIEW ESTELLA 214 (VLW H21E)(AI)(ET) (P)

PALGROVE ESTELLA 214 (PK A416E) (P)

2 A grade Embryos
50% guarantee if implanted
by an approved ET technician.

Comments: The dam of these embryos comes from the great cow family Palgrove Estella 73. We also own her dam Palgrove Estella 214, with both these females producing outstanding progeny. The most recent progeny, sired by LT Wyoming Wind, are standouts, hence why she has joined the donors again. Silverstream Landis L179, a sire that isn't readily available, as he died young, sires these embryos. He is a trait leader for Rib and Rump fat and IMF. Silverstream have the first calves on the ground by Landis and are really impressed. Landis is sired by Focus F6 and his dam is an Evolution daughter who they sold a flush in at their 50 year year female sale for \$15000. Bringing together the greats from Silverstream and Palgrove are bound to produce something special.

CHAROLAIS BREEDPLAN EBV Explanations

EBVs

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

Accuracy

Accuracy (%) is based on the amount of performance information available on the animal and its close relatives - particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

TRAITS

Calving Ease EBVs (%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs are favourable and indicate easier calving.

CE % Dir = Direct Calving Ease - The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.

CE % Daughters = Daughters' Calving Ease - The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age.

Gestation Length EBV (days) is an estimate of the time from conception to the birth of the calf and is based on Artificial Insemination & hand mating records. Lower (negative) Gestation Length EBVs indicate shorter gestation length & therefore easier calving & increased growth after birth.

Birth Weight EBV (kg) is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

200-Day Growth EBV (kg) is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.

Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.

Scrotal Size EBV (cm) is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.

Eye Muscle Area EBV (sq cm) is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher Eye Muscle Area EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower Eye Muscle Area EBVs.

Rib Fat and Rump Fat EBVs (mm) are calculated from measurements of subcutaneous fat depth at the 12/13 rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any particular carcass weight than will sires with higher EBVs.

Retail Beef Yield EBV (%) indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.

Intramuscular Fat EBV (%) is an estimate of the genetic difference in the percentage of intramuscular fat (marbling) at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.

Selection Indices

Charolais selection indices are calculated for three market specifications, namely, Domestic, Export and Northern Terminal. Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system. More information is available on selecting animals using a selection index. The Index values are derived using BreedObject technology. More information is available from the BreedObject web site.

Domestic Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting grass-finished production for the domestic trade. This Index assumes pasture grown & finished steers weighing 430 kg (240 kg HSCW and 6 mm P8 fat depth) at 12 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

Export Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd with a British cow base (eg Angus) targeting the production of steers for export markets. This Index assumes pasture grown & finished steers weighing 700 kg (380 kg HSCW and 9 mm P8 fat depth) at 29 months. Daughters are retained or sold for breeding therefore maternal traits are of importance. In response to industry feedback, positive emphasis has been placed on finishing ability.

Northern Terminal Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial herd in Northern Australia (ie Brahman cows) targeting the production of grass finished steers for the Jap Ox market. Steers are sold direct to slaughter at 630 kg (345 kg HSCW and 5 mm P8 fat depth) at 28 months. All progeny are slaughtered. In response to industry feedback positive emphasis has been placed on finishing ability.

ZEAL

0200CH50313 CEDARDALE ZEAL 125Z

DBAR SURVIVOR 220M

CEDARDALE TYRANT 31T

CEDARDALE MEMORABLE 19M

HFCC CALYPSO 1N

CEDARDALE MISS 64T

CEDARDALE PROSPECT 5P

- Son of Cedardale Tyrant 31T, who sold more than 75,000 doses worldwide
- Feature and high seller at the 2013 Cedardale Sale
- Admired at the 2012 RAWF for his attractive design and eye appeal
- Exceptional muscle shape, structural soundness, large scrotal and quiet disposition

MAVERICK
